

YOUR PARTNER IN CENTRAL EAST EUROPE

Universal - Masterbatch StandardPLUS

Based on the decades-proven universal carrier, we have significantly expanded our range of universal masterbatch standard colors.

As of now, 90 colors under the name „**StandardPLUS**” will be offered and delivered normally within 3 working days after receipt of your order.

The **specialty** of the StandardPLUS color range is the possibility for **customization**. If you want a color that lies between two of the existing colors, you can get this shade for a small fee and also within 3 working days.

As usual with Color-Service, we've compiled a sample chain. We also offer you free sampling with approximately 200 g like we do for other standard colors.

You will find references, such as **RAL** or **Pantone** numbers to the StandardPLUS portfolio within a short time in our new “RAL Pantone Finder” under www.color-service.de. There you can - also new – order samples of standard colors directly online.

In summary, the major characteristics of StandardPLUS:

- brilliant colors with good light fastness
- customizable color portfolio
- physiologically harmless
(regarding to heavy metals, chromium VI, diaryl)
- universal support with very good characteristics in many polymers
- dosage of between 0.7% up to 3.5% depending on the polymer

Another new feature is the soon to be completed “**GrayPLUS**” range. Under this name, we will offer you an interesting range of grey tones in a stepped brightness and shades in different color directions – again on the basis of a universal carrier.

Your shortest way to StandardPLUS – please, check with us!
